

Intuitive Technologies

Intuitive Technologies Questions and Answers Guide

Who are Intuitive Technologies?

Intuitive Technologies has been engaged in software development for nearly 20 years. Initially, the work was virtually all custom applications. Clients included companies such as Johnson & Johnson, Knoll Pharmaceutical, and others. Much of this work involved document management.

The company developed its first package **iiBase™**, in 1994. This solution was extended into an application for the Chemical Specialty Manufacturers Association (CSMA) and then the **TCC Librarian™**, a software asset inventory and tracking system that has been installed in companies such as Capital Blue Cross Blue Shield, Merrill Lynch, and Tumi Luggage Corporation.

In late 1997 Mr. Cutter made the decision to direct all the companies resources into the development of the **Intuitive Technologies®  Digital Data Management Suite®**.

The Cutter Companies officially debuted the **Intuitive Technologies  Digital Data Management Suite™**, or **ii**, at the AIIM (Association for Imaging and Information Management) 2001 Show. **ii** is revolutionary software that bridges the ever-widening gap between the wealth of data and information available to businesses and professionals today and current technology's ability to manage it.

What is the market for your software?

Our software has been designed to organize, manage, permanently archive, and retrieve virtually all forms of digital data for every business situation around the world. This includes legal, insurance, financial services, healthcare, engineering, real estate, graphic arts, manufacturing, and more.

These are the businesses impacted by the Digital Age. These are the businesses confronted with an ever increasing mass of digital data ... *the good news!* These are the businesses that have an opportunity to turn this data into a valuable asset or, be burdened with storage and support costs with little or no return.

Tell me more about how the software has evolved ...

The **ii** design has been evolving since 1994, when **iiBase™** was copyrighted and launched. Now, after seven years of working with customers, hardware manufacturers, newer database and coding tools, we believe that we have the solution to tame the overwhelming amount of data and information businesses are confronted with.

The main problem ten years ago was managing paper. The proliferation of PCs, the introduction of affordable digital audio and video records, the wealth of information available over the Internet, and more, users really need more than a document management solution, they need a **Digital Data Management™** solution.

What is **Digital Data Management™**?

Digital Data Management™ is the organization, management, archiving, and retrieving of virtually all forms of digital data for every business situation, regardless of their file type. Virtually all types of digital data files are organized and managed, from scanned images and application files to digital audio, video and COLD files. This allows attorneys to access and review court records, case files, taped depositions, and more within the same client record. This allows physicians to access and review patient records, digital x-rays, and more with a few simple clicks.

Who can I buy  from?

Intuitive Technologies is selling  through a nationwide network of qualified Alliance Partners. These range from software distributors, systems integrators and consultants, OEMs, and other software providers.
